

Hair Removal for All Skin Types (Dark or Light)

The LaseAway Skin and Laser Center offers the newest technology in Laser Hair Removal procedures and laser treatments for the skin. We strive to provide you with the best possible services using the latest equipment available. All of our lasers are FDA-approved.

As established professionals in Laser Hair Removal, we offer complete and permanent solutions to unwanted hair. Laser Hair Removal is a safe, fast, gentle, and effective alternative to shaving, tweezing, waxing, and electrolysis.

Traditionally, people with dark hair and light skin were considered the ideal. The better contrast between hair and skin color, the better the results. With recent advances in laser technology, this is no longer true. Now, people with all skin colors, even tanned skin, may be treated successfully with minimal risk and side effects. Older patients with gray hair still present a challenge and are often referred back to electrolysis after undergoing a few laser treatments, as the lasers target the pigment in the skin and there is very little or none.

Traditionally, people with dark hair and light skin were considered the ideal. The better contrast between hair and skin color, the better the results. With recent advances in laser technology, this is no longer true. Now, people with all skin colors, even tanned skin, may be treated successfully with minimal risk and side effects. Older patients with gray hair still present a challenge and are often referred back to electrolysis after undergoing a few laser treatments, as the lasers target the pigment in the skin and there is very little or none.

Lasers remove hair by using bursts of laser light-energy. Each laser pulse covers a specific sized area at an interval of one to two pulses per second. Therefore, smaller areas can be treated in the matter of minutes while larger areas such as legs, back, or chest, can be treated in about one hour. The lasers target your unwanted body hair without damaging delicate pores and other skin structures. A specifically designed cooling device will be used to help protect your skin and aid in your comfort during treatment.

We have a registered nurse on staff available for all laser treatments. Our highly trained staff is dedicated in providing you the with the highest quality services while maintaining a confidential and personalized care environment. Our main focus is customer satisfaction.
